

# alias

Add an alias in the current namespace to another namespace. Arguments are two symbols: the alias to be used and the symbolic name of the target namespace.

## Syntax

```
(alias aliasname namespace-name)
```

## Example

```
(ns clojure.examples.example
  (:require [clojure.set :as set])
  (:gen-class))
(defn example []
  (alias 'string 'clojure.examples.hello))
(example)
```
