

BorderText

flutter, border, text

```
import 'package:flutter/material.dart';

class BorderText extends StatelessWidget {
  const BorderText(this.text, {super.key, this.title, this.border = false});
  final dynamic text;
  final String? title;
  final bool border;

  @override
  Widget build(BuildContext context) {
    String text = (this.text == null) ? "Null" : this.text.toString();
    if (title != null) {
      text = "$title: $text";
    }

    return Container(
      margin: const EdgeInsets.all(2.0),
      padding: const EdgeInsets.symmetric(horizontal: 10.0),
      decoration: border
        ? BoxDecoration(
            color: Colors.white.withOpacity(0.5),
            backgroundBlendMode: BlendMode.srcOver,
            border: Border.all(color: Colors.blueAccent),
            borderRadius: const BorderRadius.all(Radius.circular(20)))
        : null,
      child: Text(text, overflow: TextOverflow.ellipsis),
    );
  }
}
```
