

django model count

django, model, count

```
start_date = timezone.now() - datetime.timedelta(days=day)
query_set =
History.objects.filter(target=TARGET_SEARCH).filter(datetime__gte=start_date)
).values(
    'target_id').annotate(
    count=Count('target_id'),
    search=F('target_id')
).order_by('-count').values('count', 'search')
```
