

flutter enum

```
enum PlatformType {  
  android('android', 'Android'),  
  ios('ios', 'iOS'),  
  web('web', 'Web');  
  
  const PlatformType(this.code, this.name);  
  final String code;  
  final String name;  
  
  factory PlatformType.getByCode(String code) {  
    return PlatformType.values  
      .firstWhere((value) => value.code == code, orElse: () =>  
PlatformType.web);  
  }  
}
```

```
enum TitleType {  
  id('id'),  
  order('order'),  
  developer('developer'),  
  platform('platform'),  
  service('service'),  
  category('category'),  
  flow('flow'),  
  app('app'),  
  email('email'),  
  name('name');  
  
  const TitleType(this.code);  
  final String code;  
}
```

```
enum RoleType {  
  user('user'),  
  manager('manager'),  
  admin('admin');  
  
  const RoleType(this.code);  
  final String code;  
}
```
