

form

[flutter](#), [form](#), [validation](#), [validate](#)

form validation

```
_buildSaveButton() {  
  return RoundedLoadingButton(  
    child: Text('Save', style: TextStyle(color: Colors.white)),  
    controller: _btnController,  
    onPressed: () {  
      // save item  
      if (_formKey.currentState!.validate()) {  
        // If the form is valid, display a snackbar. In the real world,  
        // you'd often call a server or save the information in a  
database.  
        ScaffoldMessenger.of(context)  
          .showSnackBar(SnackBar(content: Text('Processing Data')));  
      }  
    },  
  );  
}
```
