

# get\_it

## RootStore

### main.py

```
void main() async {  
  WidgetsFlutterBinding.ensureInitialized();  
  await Firebase.initializeApp();  
  
  final getIt = GetIt.instance;  
  getIt.registerSingleton<SettingStore>(SettingStore());  
  getIt.registerSingleton<BookStore>(BookStore());  
  
  runApp(  
    MyApp()  
  );  
}
```

```
_settingStore ??= GetIt.I<SettingStore>();  
_bookStore ??= GetIt.I<BookStore>();
```
