

if/do

```
if(condition) (  
  statement #1  
  statement #1.1  
)  
  
(  
  statement #2  
  statement #2.1  
)
```

Example

```
(ns clojure.examples.hello  
  (:gen-class))  
  
;; This program displays Hello World  
(defn Example [] (  
  if (= 2 2)  
    (do(println "Both the values are equal")  
      (println "true"))  
    (do(println "Both the values are not equal")  
      (println "false"))))  
(Example)
```

Output

```
Both the values are equal  
true
```
