

lua gsub

lua, string, gsub

```
function obj:subWord(word)
    --          가          , substring
    --
    https://stackoverflow.com/questions/15979519/detect-if-last-character-is-not
    -multibyte-in-lua
    local wordLen = string.len(word)
    if wordLen > obj.maxLength then
        word = string.gsub(word, "[^\128-\191][\128-\191]*", "")
    end

    return word
end
```
