

# PlatformType

```
enum PlatformType {  
    android('android', 'Android'),  
    ios('ios', 'iOS'),  
    web('web', 'Web');  
  
    const PlatformType(this.code, this.name);  
    final String code;  
    final String name;  
  
    factory PlatformType.getByCode(String code) {  
        return PlatformType.values.firstWhere((value) => value.code == code,  
orElse: () => PlatformType.web);  
    }  
}
```
