

ProxyProvider

```
void main() async {
  WidgetsFlutterBinding.ensureInitialized();
  await EasyLocalization.ensureInitialized();

  return runApp(
    MultiProvider(
      providers: [
        Provider<SettingStore>(
          create: (BuildContext context) => SettingStore()),
        ProxyProvider<SettingStore, TimerStore>(
          update: (context, settingStore, timerStore) =>
TimerStore(settingStore),
        ),
      ],
      child: EasyLocalization(
        supportedLocales: [Locale('en', 'US'), Locale('ko', 'KR')],
        path:
          'assets/translations',
        fallbackLocale: Locale('en', 'US'),
        child: MyApp(),
      ),
    ),
  );
}
```
