

superlifter

[dataloader](#), [clojure](#)

Superlifter: A [DataLoader](#) for [Clojure superlifter](#) is a Clojure implementation of the DataLoader pattern. It has the following features:

1. Fast, simple implementation of DataLoader pattern
2. Bucketing by time or by queue size
3. Asynchronous fetching
4. Batching of fetches
5. Shared cache for all fetches in a session
6. Guarantees consistent results
7. Avoid duplicating work
8. Access to the cache allows longer-term persistence
