

Linear models

Scikit-learn

- [SVC](#) / [SVR](#)
 - [Sklearn](#) wraps [libLinear](#) and [libSVM](#)
 - Compile yourself for multicore support
- [LogisticRegression](#) / [LinearRegression](#) + regularizers
- [SGDClassifier](#) / [SGDRegressor](#)

Vowpal Wabbit

- [FTRL](#)

Regularization parameter (C, alpha, lambda, ...)

- Start with very small value and increase it.
- SVC starts to work slower as C increases

Regularization type

- L1/L2/L1+L2
- L1 can be used for feature selection
