

Parse Cast

parse, cast

```
Future<List<PantryUser>> loadPantryUserList(User user) async {  
    var queryBuilder = QueryBuilder<PantryUser>(PantryUser())  
        ..whereEqualTo(PantryUser.keyUserId, user.objectId);  
    var response = await queryBuilder.query();  
    if (response.success) {  
        return (response.results as List<ParseObject>).cast<PantryUser>();  
    }  
    return [];  
}
```
